Why use an API?

Decoupling: By using an API other components are only dependent on the API, not the internals of the component, which means you can make changes to the internals without breaking the dependents.

Language Independence: An API can be called from any programming language.

Isolation: By using an API, the components using the API are isolated from each other. One component can be replaced without affecting any other component that uses the API.

What is Flask?

Flask is a microframework for Python based on Werkzeug, Jinja 2 and good intentions.

Why use Flask?

Light: Flask is one of the lightest frameworks available.

Easy to use: Flask is easy to use and it's well documented.
