

Project Design Phase-I Solution Architecture

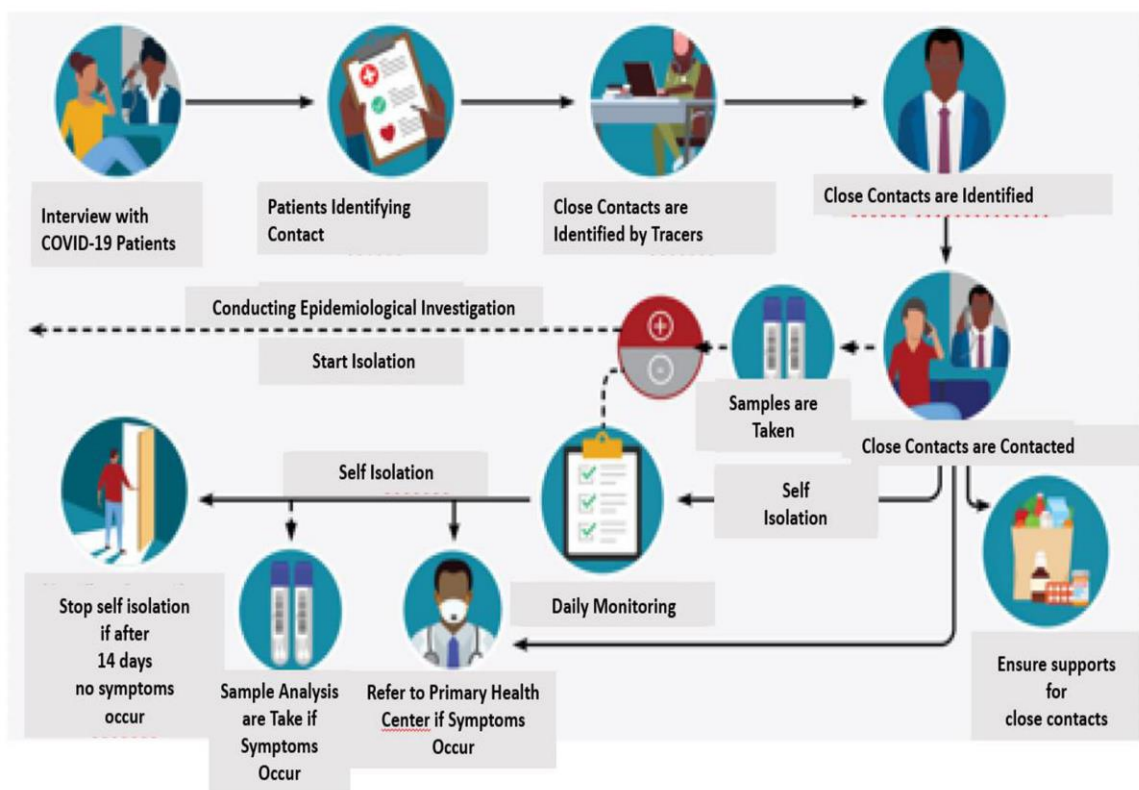

Date	14 November 2022
Team ID	PNT2022TMID51354
Project Name	Project – Containment zone alerting application
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between users problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing application problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.
